ABSTRACT

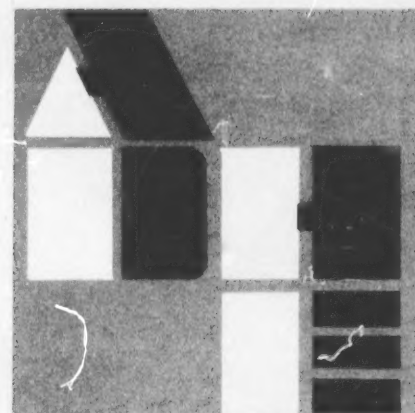

Statistical data and a narrative description of enrollment in Arkansas colleges and universities for the 1979-1980 academic year and previous years are presented. Information is presented on course auditing, nonstandard instruction, and credit-awarding activities in the state and independent colleges and universities. The annual student semester credit (SSCH) and full-time equivalent (FTE) enrollments were calculated for on-campus students. The total annual FTE enrollments, which were reported only by the state institutions, were 53,130 in 1979-1980. While the 1979-1980 FTE enrollments were a peak enrollment for the state institutions combined, it is significant that eight of the 18 state institutions involved had 1979-1980 FTE enrollments lower than institutional peak enrollments which had been reached by several of the institutions in 1975-1976 and by other institutions in 1958-1969. Since 1975-1976 there have been steady declines in graduate enrollment as a percentage of total enrollment and the declines were predominantly in the field of education. While total enrollment at the state institutions increased 10 percent from 1975-1976 through 1979-1980, graduate enrollment in education declined 12 percent. Summer school declined as a percentage of the total annual SSCH enrollment at all state universities and four of the nine two-year institutions. The nonclassroom area with the largest activity was correspondence instruction, and the next largest area was credit by examination. A total of 14,407 SSCH of correspondence study enrollment and 11,344 semester credit hours for credit by examination was reported. A SSCH summary for each state institution for 1979-1980 is presented, which shows the annual SSCH production by level and instructional areas. (Author/SW)

FOREWORD

This report is part of a regular series of analytical reports which will be published each year by the Arkansas Department of Higher Education (ADHE) based on data collected through the Arkansas Higher Education Information System (AHEIS). The data for the 1980-81 fiscal year were the first collected using the new definitions and the new forms and this report is the first on these particular topics.

Enrollment statistics are the basic activity measure in colleges and universities. The annual on-campus student semester credit hour (SSCH) production reported here is the driving force behind many of the funding formula elements in the State Board of Higher Education (SEHE) funding recommendations. For this reason, the annual on-campus SSCH and full-time equivalent (FTE) numbers used in this report are very strictly defined. They include only on-campus semester credit hour production which is recognized by ADHE for state formula funding. Other types of enrollment and credit awarding activities reported here may have educational or service merit, but they are not necessarily recognized for state formula funding and they may be excluded with the assumption that they will be self-supporting or funded from other sources.

The data for this report came from the AHEIS reports of Student Semester Credit Hours Enrolled in the 15 series for the various terms and from the Annual Summary of Auditing, Nonstandard Instruction, and Credit-Awarding Activities from the 4 series. While both independent and state institutions filed the Annual Summary of Auditing, Nonstandard Instruction and Credit-Awarding Activities, only state institutions filed the reports of Student Semester Credit Hours Enrolled and the analyses included the independent institutions only in instances involving the former report.

As mentioned, this report is the first on this topic. It is likely that suggestions from readers will help identify other useful analyses. Further, some of the data involved have not been collected under the definitions now in use prior to the 1980-81 school year and significant trends may become apparent as more years of historical data are available.

We are grateful for the assistance of those persons who served on the Information System Task Force who have made this new information system as effective as we find it to be. Special thanks must go to all those institutional officials, too numerous to list, who filled out the forms providing the data. Laurie Cox has done an excellent job on this report, ably assisted by her supervisor Dr. Tom Spencer. Wanda Cockrell and the production staff have nursed the report through several drafts with skill and patience. To all of these we express our gratitude and acknowledge our debt, but it is ADHE which must accept ultimate responsibility for the contents of the report.

EXECUTIVE SUMMARY

This report is the annual summary of enrollments, auditing, nonstandard instruction, and credit-awarding activities in the state and independent colleges and universities in Arkansas. The annual student semester credit hour (SSCH) and full-time equivalent (FTE) enrollments discussed were on-campus only and as of the close of the eleventh class day for fall and spring semesters and the fifth class day for summer semesters. The reports of audits, nonstandard instruction, and credit-awarding activities were summary reports which included all such activities within the July 1 through June 30 fiscal year.

The total annual FTE enrollments, which were reported only by the state institutions, were 53,130 in 1979-80. While the 1979-80 FTE enrollments were a peak enrollment for the state institutions combined, it is significant that eight of the 18 state institutions involved in this analysis had 1979-80 FTE enrollments lower than institutional peak enrollments which had been reached by several of the institutions in 1975-76 and by other institutions as long ago as 1968-69.

The analysis of graduate enrollments identified several trends. Since 1975-76 there have been steady declines in graduate enrollment as a percentage of total enrollment and the declines in graduate enrollment were predominantly in the field of education. Of the seven state institutions with graduate programs, the graduate FTE enrollments in 1979-80 were a smaller percentage of the total FTE enrollments for five institutions than was the case in 1975-76. While total enrollment at the state institutions increased 10% during this period, graduate enrollment in education declined 12%. There was a 27% increase in graduate enrollment in fields other than education, but virtually all of the graduate non-education increase was at two schools.

Analysis of summer school enrollment revealed that summer school has declined as a percentage of the total annual SSCH enrollment at all state universities and four of the nine two-year institutions. The relative decline in summer school enrollment occurred at both the undergraduate and graduate levels. At the graduate level the relative decline in summer school enrollment appeared related to the decline in demand for graduate education courses. At the undergraduate level, the reason for the decline was not clear.

Data on auditors, nonstandard instruction, and credit-awarding activities are presented in this report for the first time. The non-classroom area with the largest activity was correspondence instruction. A total of 14,407 SSCH of correspondence study enrollment was reported. The next largest area of activity was credit by examination where 11,344 semester credit hours were awarded. Over half of those were awarded based on the College Level Examination Program general exam.

The appendix contains an SSCH summary for each state institution for 1979-80. Each summary shows the annual SSCH production both by level and by instructional area based on the Higher Education General Information Survey taxonomy.

ANNUAL ENROLLMENT, AUDITING, NONSTANDARD INSTRUCTION
AND CREDIT-AWARDING ACTIVITIES IN ARKANSAS
INSTITUTIONS OF HIGHER EDUCATION

This report summarizes enrollment in Arkansas institutions of higher education for the 1979-80 academic year and makes some comparisons to enrollments for previous years. Generally, an academic year coincides with the fiscal year, beginning July 1 and ending June 30. Included in the academic year are the second summer, fall, spring, and first summer terms. Fall, spring, and summer on-campus enrollment, auditing, and nonstandard/credit-awarding activities are addressed.

Annual Enrollment

On-campus refers to courses taking place in the facilities or on the grounds of an institution, excluding community colleges, or to students enrolled in such courses. Community college courses offered inside the legal taxing district of a community college, except those taught at a military installation, are considered on-campus. The number of annual full-time equivalent (FTE) undergraduate students was calculated by dividing the annual total of student semester credit hours (SSCH) carried in on-campus undergraduate level courses by 30. The number of annual FTE graduate students was calculated by dividing the annual total of SSCH carried on-campus at the master's, specialist, and doctoral course levels by 24. Independent institutions did not report SSCH by course level and therefore the number of FTE students was not calculated for these schools. The total number of on-campus FTE students for 1967-68 through 1979-80 is listed for each state institution in Table 1. The numbers of undergraduate and graduate on-campus FTE students are listed by school for 1967-68 through 1979-80 in Table 11 in the Appendix. Annual SSCH and FTE enrollment data were not collected from the University of Arkansas for Medical Sciences (UAMS) until 1980-81. Data submitted by UAMS will be included in later reports.

The total number of FTE students enrolled in all Arkansas state institutions rose from 36,776 in 1967-68 to 42,094 in 1971-72. At a majority of the schools, the number of FTE students decreased from 1971-72 through 1973-74; however, FTE enrollment at most schools increased in 1974-75 even while new institutions opened. The establishment of East Arkansas Community College (EACC), Mississippi County Community College (MCCC), North Arkansas Community College (NACC), and Southern Arkansas University--El Dorado Branch (SAUE), the transfer of Southern Arkansas University--Technical Branch (SAUT), and the recession which began in 1975 may be partially related to the 23% increase in total FTE enrollment from 1973-74 through 1975-76. The total number of FTE students reached an all-time high of 53,130 in 1979-80, which may be partially attributable to the onset of another recession. As job markets become increasingly tight, many unemployed people attend colleges and universities to increase their job skills.

7/8/81

The number of FTE students enrolled at Henderson State University (HSU) has declined each year since 1975-76. FTE enrollment at Southern Arkansas University--Magnolia (SAUM) declined from 2,413 in 1968-69 to 1,743 in 1974-75. The school's FTE enrollment for 1979-80 was 1,924. The University of Arkansas--Fayetteville (UAF) has experienced growth each year since 1973-74. FTE enrollment at the University of Arkansas at Little Rock (UALR) increased each year from the school's becoming a public institution in 1969-70 until 1977-78 when enrollment stabilized at about 6,700 FTE students. The University of Arkansas at Pine Bluff (UAPB) declined in FTE enrollment from 3,783 in 1968-69 to 2,211 in 1973-74 and then increased to about 3,000 where it has hovered for the last four years.

From the time they are founded until they become well-established institutions, two-year schools typically follow an unusual pattern regarding the number of FTE students enrolled. When a two-year institution is first established, it attracts a high proportion of part-time students, such as housewives and employed adults who had not previously been able to attend college. As local residents become familiar with the school and its credibility is established, enrollment of full-time students increases, causing the number of FTE students to rise. EACC, Garland County Community College (GCCC), MCCC, NACC, and SAUE each reported a relatively low FTE enrollment figure for the year in which they were established and a much higher number for the following year. Phillips County Community College (PCCC) and Westark Community College (WCC) experienced growth each year from 1967-68 through 1975-76; it now appears that FTE enrollment has become more stable at these schools.

Table 2 displays for 1975-76 through 1979-80 percent undergraduate and percent graduate annual FTE enrollment. For each institution except Arkansas Tech University (ATU) and UALR, the percentage of 1979-80 graduate FTE students decreased from the 1975-76 percentage. Graduate FTE students as a percentage of total annual FTE students increased each year at UALR, from 8% in 1975-76 to 13% in 1979-80. Fourteen new graduate programs were approved for UALR during that period. The percentage of graduate FTE students at the University of Central Arkansas (UCA) has declined from 11% in 1976-77 to 9% in 1979-80.

Annual graduate SSCH produced in the field of education and annual graduate SSCH produced in noneducation fields are displayed by institution for 1975-76 through 1979-80 in Table 3. The number of graduate education SSCH produced in 1979-80 was less than that produced in 1975-76 at each institution except ATU and UALR. This is possibly due to an increase in the number of graduate education courses offered off-campus and declines in state enrollments.

At UAF and UALR, the number of graduate SSCH produced by students in fields other than education has increased each year since 1975-76. As of 1979-80, UAF offered 77 master's programs and 23 doctoral programs, more graduate programs than any other Arkansas institution. The increases at UALR may be partially due to the addition of new programs. The number of graduate noneducation SSCH produced at the other institutions has been fairly stable.

Tables 16 through 24 in the Appendix display SSCH by course level and by subject area for each state four-year institution for 1979-80. These data are listed for each state two-year institution in Table 25 in the Appendix.

Summer Enrollment

Tables 12, 13, 14, and 15 in the Appendix display on-campus SSCH by school for the second summer, fall, spring, and first summer terms during 1967-68 through 1979-80. For each institution, the number of SSCH produced each year during the second summer term was lower than that produced during the first summer term. Total SSCH produced during the first summer term of each year comprised 58-63% of all SSCH produced during the summer of that year. EACC, NACC, and PCCC offered only one summer term each year.

SSCH produced during the second summer term declined from 1975 to 1979 at ten of fifteen institutions offering a second summer term. SSCH produced during the first summer term declined from 1976 to 1980 at ten of eighteen institutions offering at least one summer term.

Summer undergraduate SSCH as a percentage of annual undergraduate SSCH is presented for 1975-76 through 1979-80 in Table 4. This table allows one to infer the relative importance of summer school at the undergraduate level at each institution. Among the four-year institutions, UALR, with 12%, and SAUM, with 11%, had the largest percentages in 1979-80. These schools generally had the largest percentages each year. UALR and SAUM enrolled a large number of transient students and teachers during the summer. The smallest percentage each year was at UAF. MCCC, with 13%, and SAUE, with 12%, had the highest percentages among the two-year institutions in 1979-80. Summer school students at SAUT enrolled for only 445 SSCH, 3% of the school's annual SSCH.

At each four-year institution and four two-year institutions, summer undergraduate SSCH as a percentage of annual undergraduate SSCH was lower in 1979-80 than in 1975-76. Several theories suggest explanations for the relative decline in summer school enrollment. The theory with the most face validity is that financial aid is becoming more important to students and that the aid is primarily for the traditional nine months terms. Much less student financial aid is available during the summer terms than during the fall and spring terms. While all the reasons for the relative decline are unclear, several other theories have been advanced by ADHE and institutional staff:

1. Some students who formerly enrolled in general required courses in summer school in order to get required courses out of the way or graduate early have turned to the College Level Examination Program (CLEP) as an alternative. The majority of state institutions offer credit by CLEP general exam, CLEP subject exam, other national exam, and/or local exam.
2. The number of off-campus courses is increasing. Students who might normally attend summer school are taking advantage of courses being taught near their homes during the fall and spring terms.
3. Many students are compelled to work full-time during the summer to build a nest-egg so they may attend school during the fall and spring terms. This trend may be better understood in the future.

Summer graduate SSCH as a percentage of annual graduate SSCH is displayed for 1975-76 through 1979-80 in Table 5. UAF, with 19% and UALR, with 20%, had the lowest percentages of their graduate SSCH in the summer during 1979-80. Arkansas State University--Jonesboro (ASUJ), ATU, HSU, SAUM, and the University of Central Arkansas (UCA) apparently placed much more emphasis on summer graduate programs than on graduate programs during the fall and spring terms. Summer graduate SSCH as a percentage of annual graduate SSCH was lower in 1979-80 than in 1975-76 for each institution except HSU. Decreasing enrollment of students in education courses (see Table 3) appears to be responsible for the decline in summer graduate enrollment. Table 26 in the Appendix displays summer graduate SSCH produced in the field of education as a percentage of total summer graduate SSCH produced in 1979-80. At each institution except UAF and UALR, the majority of summer graduate SSCH produced were in the field of education. The least number of summer graduate SSCH were produced at SAUM and 92% of these were in education.

Relationship Between Fall and Spring SSCH Production

Over the past 13 years, total fall SSCH production at all state institutions consistently exceeded total spring SSCH production. Total spring SSCH produced each year as a percentage of total fall SSCH produced in that year ranged from 90-98%. This may be attributable to increased recruiting efforts prior to the fall terms, to the influx of recent high school graduates to the colleges and universities following graduation in the summer, and to most degrees and certificates being designed in units of nine month terms. Fall enrollment is discussed in further detail in On-Campus Enrollment in Arkansas Higher Education Institutions, Fall 1980, published by ADHE.

Auditing, Nonstandard Instruction, and Credit-Awarding Activities

Auditing, nonstandard instruction, and credit-awarding activities are reported by 31 Arkansas institutions of higher education. These data are presented for 1979-80 in Tables 6, 7, 8, and 9. Auditing refers to enrollment in a course for which semester credits will not be received. Tables 6 through 9 display the number of credit hours that would have been awarded for these courses had students enrolled for credit rather than for audit. During 1979-80 there was not much auditing as a percentage of total enrollment. Students at UALR audited the most hours, 1,663, but these hours comprised less than 1% of total enrollment at the school. Students at WCC audited more than twice as many SSCH as were audited at any other two-year institution. Auditing also comprised less than 1% of total activity at WCC. It is significant that auditing is not recognized in ADHE funding formulas.

High school enrollment refers to students who are enrolled simultaneously in a high school and an institution of higher education, excluding students enrolled as a part of a recognized college/high school cooperative vocational program, for whom fees are paid by the public school district. Only ATU, UCA, and Central Baptist College (CBC) enrolled such students during 1979-80.

Those on-campus credits for which high school students pay their own fees and enroll for higher education credit in addition to their normal high school program are included as regular enrollment. Students enrolled in college/high school cooperative vocational programs at PCCC generated 864 SSCH during 1979-80. WCC was the only other school participating in such programs.

Courses offered via television, newspaper, correspondence or other media are classified as off-campus. UALR was the only institution to offer credit via television, newspaper, or other media. Students at ASU, UAF, UCA, and CBC were awarded a total of 14,407 SSCH for courses taken by correspondence. Credit by examination refers to academic credit which is awarded to students by an institution solely by means of performance on examinations and accepted in lieu of enrollment in and completion of credit courses. Twenty-two institutions awarded a total of 11,344 SSCH as credit by examination. Credit for life experience or prior learning refers to academic credit which is awarded to students by an institution solely by means of assessment and evaluation of knowledge, understanding, skills, etc. acquired in a given experience or in the totality of the individual's experience. Such credit was awarded by ASU, HSU, the University of Arkansas at Monticello (UAM), UAMS, MCCC, and WCC.

ASUJ, UCA, and ASUB offered courses at the Little Rock Air Force Base during 1979-80. UCA students enrolled for the most SSCH, 2,716, followed by 2,390 at Arkansas State University--Beebe Branch (ASUB). Four Philander Smith College (PSC) students studied mass communications in Atlanta and were awarded 72 SSCH for out-of-state off-campus activities.
